What is claimed is:

5

- 1. An apparatus adapted to grasp a brake pedal, comprising:
 - (a) an upper member;
 - (b) a lower member in slidable communication with the upper member;
 - a locking mechanism in communication with the upper member and having a selectable first position and a second position;
- (d) a coupling member connected to the lower member; and wherein the second position, the locking mechanism applies sufficient frictional force to lock the upper member in a selected position against the brake pedal.
- The apparatus of Claim 1, wherein the locking mechanism further comprises
 a cam lever connected to a cam shoe, wherein the cam shoe is between the cam lever and the
 upper member.
 - 3. The apparatus of Claim 1, wherein the locking mechanism is a cam lever.
- The apparatus of Claim 1, wherein the lower member is further comprised of
 a cam shoe that is in operable contact with the locking mechanism.
- The apparatus of Claim 4, wherein at least a portion of the cam shoe is connected to the lower member.
- The apparatus of Claim 1, wherein the lower member is further comprised of at least one flange for gripping the brake pedal.
- The apparatus of Claim 1, wherein the upper member is further comprised of at least one flance.

- 8. The apparatus of Claim 1, wherein the upper member is further comprised of at least one flange with a beaded edge for facilitating removal of the upper member from the brake pedal.
- 9. The apparatus of Claim 1, wherein the lower member is further comprised of at least one flange with a beaded edge to facilitate removal from the brake pedal.
- 10. The apparatus of Claim 1, further comprising a biasing member between the upper member and the lower member.
 - 11. The apparatus of Claim 10, wherein the biasing member is at least one spring.
 - 12. The apparatus of Claim 1, wherein the lower member includes a handle.

- 13. An apparatus adapted for grasping with a brake pedal, comprising:
 - (a) an upper jaw;
 - (b) a lower jaw in slidable communication with the upper jaw;
 - (c) a cam lever:

5

- (d) a cam shoe interposed between the cam lever and the upper jaw; and
- (e) a coupling interconnected to the lower jaw.
- 14. The apparatus of Claim 13, wherein the cam lever has a first unlocked position and a second locked position, further wherein the second locked position, the cam lever applies sufficient frictional force to the cam shoe to selectively lock the upper jaw in a desired position relative to the lower jaw.
- 15. The apparatus of Claim 13, further comprising a biasing means interposed between the upper jaw and the lower jaw.
 - 16. The apparatus of Claim 15, wherein the biasing means is at least one spring.
- 17. The apparatus of Claim 13, wherein the lower jaw is further comprised of an aperture adapted to receive the cam shoe.
- 18. The apparatus of Claim 13, wherein at least a portion of the cam shoe is interconnected to the lower jaw.
- 19. The apparatus of Claim 13, wherein the lower jaw is further comprised of at least one flange for gripping the brake pedal.
- 20. The apparatus of Claim 13, wherein the upper jaw is further comprised of at least one flange for gripping the brake pedal.

- 21. The apparatus of Claim 13, wherein the upper jaw is further comprised of at least one flange with a beaded edge for facilitating removal of the upper jaw from the brake pedal.
- 22. The apparatus of Claim 13, wherein the lower jaw is further comprised of at least one flange with a beaded edge for facilitating removal of the lower jaw from the brake pedal.
- The apparatus of Claim 13, wherein the lower jaw is further comprised of a handle.

- 24. An apparatus adapted for gripping a brake pedal, comprising:
 - (a) an upper gripping means;

5

- (b) a lower gripping means in slidable communication with the upper gripping means;
- (c) a means for applying frictional force against the upper gripping means to selectively lock the upper and lower gripping means against the brake pedal; and
- (d) coupling means interconnected to the lower gripping means.
- 25. The apparatus of Claim 24, wherein the means for applying frictional force is a cam lever.
- 26. The apparatus of Claim 24, further comprising a biasing means interposed between the upper gripping means and the lower gripping means.
 - 27. The apparatus of Claim 26, wherein the biasing means is at least one spring.
- 28. The apparatus of Claim 24, wherein the means for applying frictional force is a cam lever in communication with a cam shoe.
- 29. The apparatus of Claim 28, wherein at least a portion of the cam shoe is interconnected to the lower gripping means.
- 30. The apparatus of Claim 24, wherein the lower gripping means is further comprised of at least one flange for gripping the brake pedal.
- The apparatus of Claim 24, wherein the upper gripping means is further comprised of at least one flange.

- 32. The apparatus of Claim 24, wherein the upper gripping means is further comprised of at least one flange with a beaded edge for facilitating removal of the upper gripping means from the brake pedal.
- 33. The apparatus of Claim 24, wherein the lower gripping means is further comprised of at least one flange with a beaded edge for facilitating removal of the lower gripping means from the brake pedal.
